### Situation

The Department of Customs of Nepal needed to support Customs inspectors in their daily tasks while in the field with limited access to computers to report on goods examination.

### Solution

An ASYCUDA Mobile App, fully integrated with the ASYCUDAWorld system, provides inspectors with an easy way to fill and update in real-time the inspection report with their findings, in order for the Customs process to continue without interruption due to the limited access to equipment in the field. This initiative was further extended to other features offering a simple and modern way for brokers to retrieve declarations and check their status; and for Customs officers to fill the inspection report, manually assign declarations to other inspectors, assess and reroute declarations and authorize the goods exit at the gate thanks to a barcode generated on the mobile App. This ASYCUDA Mobile App initiative was further enhanced with Transit feature, developed in partnership with Kosovo Customs.

### Result

The deployment of the ASYCUDA Mobile Application has allowed:

- Increased security by ensuring e-document integrity using barcodes
- Improved access to information on the Customs process
- Ability for inspectors to submit real-time inspection results while in the field without further delay
- Shortened Customs clearance time
- Limited interaction between brokers and Customs and reduced use of paper.

Deploying an ASYCUDA Mobile Application offers a solution to the interruptions in the Customs clearance process.

**Concurrent users** connected during peak time and **3,000 declarations** processed daily through ASYCUDAWorld.

The Mobile Application has been helpful for the faster Customs clearance of the legitimate traders’ activities where Customs staff can perform the clearance procedure without going back to their desk after physical inspection of the goods in the field.
